

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) An outside mirror for a vehicle, comprising:
an image capturing unit; and
a visible-light emitting unit that emits visible light, wherein
the visible-light emitting unit is arranged such that the visible light emitted does not
directly enter into the image capturing unit.
2. (Currently Amended) The outside mirror according to claim 1, wherein the visible-
light emitting unit functions as any one of a side-turn lamp, a side marker lamp, ~~[[and]]~~ or a
turn lamp of a front combination lamp of the vehicle.
3. (Currently Amended) The outside mirror according to claim 1, wherein the visible-
light emitting unit includes a visible-light distribution controller that controls distribution of
the visible light emitted within a predetermined range, wherein the visible-light distribution
controller is configured as a reflector or a prism.
4. (Original) The outside mirror according to claim 1, further comprising a lens that
transmits the visible light emitted.
5. (Original) The outside mirror according to claim 1, wherein the visible-light
emitting unit is provided as a unit part.
6. (Currently Amended) The outside mirror according to claim 1, wherein the image
capturing unit has a mechanism configured to be tilted by manual operation or by remote
operation.
7. (Currently Amended) The outside mirror according to claim 1, further comprising:
an infrared emitting unit that emits infrared ~~[[ray]]~~ radiation.

8. (Currently Amended) The outside mirror according to claim 7, wherein the visible-light emitting unit functions as any one of a side-turn lamp, a side marker lamp, ~~[[and]]~~ or a turn lamp of a front combination lamp of the vehicle.

9. (Original) The outside mirror according to claim 7, wherein the visible-light emitting unit includes a visible-light distribution controller that controls distribution of the visible light emitted within a predetermined range.

10. (Currently Amended) The outside mirror according to claim 7, wherein the infrared emitting unit includes an infrared ~~[[ray]]~~ radiation distribution controller that controls distribution of the infrared ~~[[ray]]~~ radiation emitted within a predetermined range; and

the visible-light emitting unit includes a visible-light distribution controller that controls distribution of the visible light emitted within a predetermined range.

11. (Original) The outside mirror according to claim 7, further comprising a first lens that transmits the visible light emitted.

12. (Currently Amended) The outside mirror according to claim 7, further comprising a second lens that transmits the infrared ~~[[ray]]~~ radiation emitted.

13. (Original) The outside mirror according to claim 7, wherein the infrared emitting unit is provided as a unit part.

14. (Currently Amended) The outside mirror according to claim 7, wherein the infrared emitting unit includes an infrared source,
the infrared source includes at least one infrared light-emitting-diode that emits the infrared ~~[[ray]]~~ radiation,
the visible-light emitting unit includes a visible-light source, and
the visible-light source includes at least one visible light-emitting-diode that emits the

visible light.

15. (Currently Amended) The outside mirror according to claim 14, wherein the infrared light-emitting-diode is mounted on one surface of a substrate, and the visible light-emitting-diode is mounted on an other surface of the substrate.

16. (Original) The outside mirror according to claim 15, wherein both the infrared light-emitting-diode and the visible light-emitting-diode are surface-mounted.

17. (Original) The outside mirror according to claim 15, wherein the substrate is a flexible substrate.

18. (Currently Amended) The outside mirror according to claim 7, wherein the image capturing unit has a mechanism configured to be tilted by manual operation or by remote operation.

19. (Original) An outside mirror for a vehicle, comprising:
an image capturing unit; and
a visible-light emitting unit that emits visible light, wherein
the image capturing unit captures an image of an area illuminated by the visible-light emitted or near the area, and
the visible-light emitting unit is arranged such that the visible light emitted does not directly enter into the image capturing unit.

20. (Original) An outside mirror for a vehicle, comprising:
an image capturing unit; and
a visible-light emitting unit that emits visible light, wherein
the visible-light emitting unit illuminates an area where the image capturing unit captures an image or near the area, and
the visible-light emitting unit is arranged such that the visible light emitted does not directly enter into the image capturing unit.
